Summary

Computer Engineering graduate focused on AI and backend development. Experienced in building REST APIs and data-driven backends with Python, training and deploying machine learning and computer vision models, and developing cross-platform mobile apps with Flutter. Comfortable taking a project from requirements to production.

Education

Düzce University **Sep 2021 – Jun 2026**
B.Sc. in Computer Engineering (English) – GPA: 3.32/4.0 *Düzce, Turkey*

Relevant Coursework

- Machine Learning
- Artificial Intelligence
- Data Structures
- Operating Systems
- Deep Learning
- Web Programming
- Database Systems
- Computer Networks

Experience

Provincial Directorate of Agriculture and Forestry **Jul 2026 – Aug 2026**
Information Technology Intern *Diyarbakır, Turkey*

- Designed and built an internal ticket and asset-tracking platform (**Flask, SQLAlchemy, scikit-learn**) for the IT department of a ∼1,500-employee organization; scoped the requirements independently after observing the department's manual workflow.
- Built an **ML module classifying Turkish support tickets** by category and priority on a self-collected, hand-labeled dataset; displayed predictions next to user input so staff could audit the model instead of trusting it blindly.
- Added QR-based device assignment, **role-based access control** and a management dashboard; chose **TF-IDF similarity** over an LLM for the FAQ bot to eliminate fabricated answers.

Öztaş Metal Solutions **Aug 2024 – Sep 2024**
Computer Engineering Intern *Manisa, Turkey*

- Built a load-cell weighing and part-counting station (**Arduino, C++, HX711, Nextion HMI**) that converts measured weight into piece count for small metal parts, with taring and recalibration from the touchscreen.
- Gained hands-on experience in embedded systems, XAMPP, SQL databases, and network troubleshooting.

Projects

Albumium | *Flutter, Dart*

- **Co-developed in a 2-person team and published on Google Play and the App Store**; a Flutter app that turns photos into interactive digital albums with animated page-flip previews and on-device MP4 export.

AI-Powered Smart Route Planning App | *Flutter, AI, Google Maps API*

- Developed an AI-powered Flutter app with Google Maps API integration to optimize multi-destination routes, **reducing travel time by 20%**.

Brain Hemorrhage Detection on Head CT | *Python, YOLOv8, Streamlit*

- Built a YOLOv8 pipeline and interactive Streamlit app to localize five brain hemorrhage subtypes on CT scans, achieving **0.550 mAP@0.5** on a challenging 5-class imbalanced medical dataset.

Plant Disease Detection | *Python, TensorFlow, Flutter*

- Developed a deep learning model for 15-class plant disease classification with **96.87% accuracy**, deployed as a TFLite Flutter mobile app.

Technical Skills

Languages: Python, C/C++, SQL, JavaScript
Backend & Data: FastAPI, Flask, SQLAlchemy, PostgreSQL, SQLite, REST APIs
ML & CV: TensorFlow, Keras, scikit-learn, YOLOv8, OpenCV
Tools: Docker, Git, GitHub Actions, AWS, Google Cloud, Flutter, Arduino, Cursor, Claude Code
Spoken Languages: Turkish (Native), English (Professional Working Proficiency), German (Currently learning)

Leadership / Extracurricular

DÜSİBER Cyber Security Community **2024 – 2025**
President *Düzce University*

Google Developer Student Clubs (GDSC) Düzce **2023 – 2024**
Hackathon Team Member *Düzce University*
